

Git Workflow & Commonly Used Commands

Working Directory → Staging Area → Repository

(your files) (git add) (git commit)

Basic Git Commands

`git --version` # Check git version

`git config --global user.name "Your Name"`

`git config --global user.email "you@email.com"`

`git init` # Initialize a repo

`git status` # Check working tree status

`git add file1` # Stage a file

`git add .` # Stage all changes

`git commit -m "message"` # Commit changes

Working with Remote Repositories:

`git clone <repo-url>` # Clone repository

`git remote -v` # Show remote URLs

`git remote add origin <url>`

`git push` # Push commits

`git pull` # Fetch + merge

git fetch # Fetch only

Branching Commands:

git branch # List branches

git branch dev # Create branch

git checkout dev # Switch branch

git checkout -b feature1 # Create & switch

git merge dev # Merge branch

git branch -d dev # Delete branch

Undo / Fix Mistakes:

git restore file1 # Discard file changes

git restore --staged file1 # Unstage file

git reset --soft HEAD~1 # Undo commit, keep changes

git reset --hard HEAD~1 # Undo commit + changes

View History & Logs:

git log # Full history

git log --oneline # Short log

git show <commit-id> # Show commit details

git diff # Working tree diff

git diff --staged # Staged diff

Stash (Temporary Save):

git stash # Save changes

git stash list

git stash apply

git stash pop

Fix GitHub 403 / Auth Issues:

git config --global --unset credential.helper

git config --global user.name

git config --global user.email
